Unleash growth by using promotions via API

Overview

Overview of promotions via API

How to guide

Details on how promotions via API works and guidelines to keep in mind

Benefits

Key benefits for connectivity partners and properties

Getting started

Next steps, estimated level of effort and examples

Important note: Promotions via API are not available for large chains. Except for large chains, all other property types can take advantage of Promotions via API within your platform once you integrate. If you aren’t sure if your properties are supported, please contact your Account Manager.
Provider feedback helped us identify the opportunity to launch promotions via API

“We are happy to support any OTA that has an API for promotions.”

“We would love to have some documentation around this feature [Promotions via API] ASAP :)

“We would really like to see the promotions API. This will ensure Expedia is receiving the same parity on promotions as the other channels.”
In the past, a connected property needed to create promotions *manually*...

...but the introduction of **promotions** within the Lodging Supply GraphQL API will enable promotions to be managed *seamlessly* within your connectivity solution.
Overview

**Functionality**

Properties can seamlessly create, retrieve, manage, and deactivate Expedia promotions within your connectivity solution.

**Goals**

1. Allow properties to manage promotions seamlessly and in bulk
2. Align properties’ promotions across OTA channels
3. Enable expanded capabilities for your properties
4. Provide guests access to the best rates to increase conversion

*Important Note:* Promotions via API are not available for large chains. All other property types can take advantage of promotions within your platform once you integrate. If you aren’t sure if your properties are supported, please contact your Account Manager.
How promotions via API will help you

Promotions will unlock these three key benefits for you

**Robust capabilities increase your stickiness**
Allow your properties to automate, promotions and increase operational efficiency. This makes you more valuable to properties and enables you to develop stronger relationships.

**More traffic & conversions for properties**
Allow faster creation and modification of promotions on a large scale. Increase promotional activity leads to increase traffic and conversions for properties.

**Align capabilities across channels**
Bring alignment across distribution channels by enabling properties to consistently merchandise promotions.
How promotions via API will help your properties

Promotions will unlock these three key benefits for your properties

**Maximize number of high value bookings**
Ensure each guest always has access to the best rates. Maximize booking value by utilizing various audience filters to target exclusive traveler and stay types

**Save time and increase control**
Allow for selecting preset audience, timeframe, length of stay and much more, providing promotional control with ease

**Increase customer visibility**
Ensure more travelers see and book promoted properties through specialize merchandising and increase visibility

Unlock the power of Expedia promotions

Streamline the promotions process to save time

Solve for large scale usage

Over the last 12 months, Expedia Partners have created over **4.8 million promotions** using Partner Central. Think of how much time would be saved if this process was streamlined!¹

Serve properties better

Of the 4.8 million promotions created, around **78%** were created by **Connected Partners**. There is an opportunity to serve these customers' needs in a smarter way. ¹

Save time

With an approximate time of **5 minutes spent**² creating each promotion manually, plus time spent switching between software and Partner Central, the launch of Promotions via API has potential to save our **Connected Partners** hours in time through streamlining promotions.

¹ Expedia, Inc. LPS M/O Promotions Dashboard – Last 12 month data as of 6/30/20
² Based on internal usage testing
“It [promotions via API] was quite clear. I did not have difficulties to implement.”

-Homerez
How it works for properties

1. Select the promotion name in which you want to retrieve, create, manage, or deactivate.

2. Define the audience, offer, dates, and name criteria. The promotion can be applied to one or more rate plans.

3. Submit the promotion for travelers to enjoy!
Create your own: Offer travelers a great deal and stand out in search results
- **Single discount**: Percentage discount (between 1 - 75%) applying to all nights of stay
- **Multi-night**: Reward those who have longer stays
- **Day of the week**: Manage occupancy fluctuations with deals for certain days only

Same-day deal: Offer last-minute travelers a one-time discount off your lowest-price room. Attract last minute travelers by setting up a recurring deal for same-day booking

Early booking: Give a discount to committed travelers who book early

Note: All promotions naming data is for internal tracking purposes only and is not live on site

Using promotions to target valuable travelers

If you want to…

Limit exposure of promotional pricing to a targeted audience

Target high-value travelers

Reach out to highly-committed travelers

Then try…

• Restricted length of stay
• Mobile/tablet fencing

• Members only deal

• Early booking deal

Because…

Provide discounts to more targeted audiences to drive better business outcomes.

On average, members book twice as many nights and spend over two-times that of non-members.¹

Committed travelers may be willing to book early to get a great deal.
Promotions via API developer guide

November, 2020
What’s included in the developer guide

Unleash growth by using promotions via API

- **Best practices** - Tips and notes for getting started
- **Examples** - Example queries and how-to
- **Getting started** - Next steps for getting started

Important note: Promotions via API are not available for large chains. Except for large chains, all other property types can take advantage of Promotions via API within your platform once you integrate. If you aren’t sure if your properties are supported, please contact your Account Manager.
Important notes for promotions via API

- This capability is provided as part of the **Lodging Supply GraphQL API**. If you are unfamiliar with GraphQL concepts, such as queries and mutations, read this [overview](#) to learn more.

- All time fields are provided in **local hotel time**.

- **Do not send reduced rates to Expedia in place of discounting rates through promotions via API** (e.g. if giving 10% off a $100 stay, do not submit $90 rate); this will double the promotional offering for the traveler.

- Offers are available from **1-75% off**.

- Ensure you are **not setting conflicting field values** (e.g. min/max Length of Stay or Advance Booking Windows that contradict your rate plan restrictions).

- Ensure you have **access to the properties and credentials** within Expedia in order to manage promotions via API.
Best practices for promotions via API

Things to note while integrating promotions via API:

• Promotions via API is not supported for large hotel chain properties. If properties that belong to a large chain try to run a promotion via API through software, they will receive an error message. If you serve chain hotels in addition to independent ones, and you are integrating with promotions via API, **we strongly recommend displaying a friendly error message** in your user interface to remind properties they can load individual promotions in Partner Central.

  Example: “This functionality is not available for some chain properties. Instead, you can load promotions using Expedia’s Partner Central.”

• Each user token **is valid for 30 minutes** even if other tokens are created.

• If a request is issued using an **expired token**, an error is returned stating that the token is **“invalid”**. Request a new token if this error arises.

• If calling the API from multiple servers, you can request a **unique access token from each server and save it in memory.**
Developer best practices for promotions via API

- Prior to updating information through mutation, it is always recommended to **do a query** (through the promotion Id) to **retrieve latest data on the promotion** – promotions can be updated manually via other channels and you want to ensure the latest information is being retrieved.

- It is important to **ensure that the RateplanIds specified belong to the property**. The promotion API operates under the assumption that the RateplanIds are available to the properties; an error will arise if the rate plan is not applicable to the property.

- Use Same Day and Early Booker promotion types to leverage **specialized on-site merchandising**.

- It is not recommended to modify a BASIC promotion to an EARLY BOOKING or a SAME DAY promotion (or vice versa). To ensure proper merchandising on site, **deactivate the BASIC promotion and create a new SAME DAY promotion**.

- When creating promotions with no end dates, we recommend building a seamless user experience by providing a checkbox or option to select "no end date". This is preferred over allowing the selection of 06-06-2079 as the maximum promotion end date.
Here is the syntax of the `property` query to retrieve all active promotions for a specified property.

```java
query {
  property(id: String!, idSource: IdSource!) {
    promotions(pageSize: Int!, after: String, filter: FiltersInput): Promotions
  }
}
```
How to create a basic promotion

Here is the syntax of the `createSingleDiscountPromotion` mutation, to create any single promotion.

```
createSingleDiscountPromotion(
  propertyId: String!
  propertyIdSource: IdSource!
  promotion: SingleDiscountPromotionCreateInput!
): Promotion
```

Its response, if created successfully, includes the promotion ID that can be used to update the promotion, if necessary.
How to modify a promotion

Here is the syntax of the `updateSingleDiscountPromotion` mutation, to modify a single promotion. Specify only those fields that need to be modified.

```javascript
updateSingleDiscountPromotion(
  promotion: SingleDiscountPromotionCreateInput!,
  propertyId: ID!,
  propertyIdSource: IdSource!
): Promotion!
```

We recommend that you retrieve the latest data stored for the promotion on the Expedia platform (by issuing the `property` query and specify the promotion ID) before issuing this mutation.
Modifying promotions across products

A single promotion can be attached to multiple rate plans.

Partners do not need to create multiple promotions in this instance.
Getting started

Review promotion specifications [here](#)

- If you have read the documentation and are ready to continue, reach out to your Account Manager to discuss next steps

Test the integration

- Once permissions have been provided, you will be able to run queries offered by the Lodging Supply GraphQL API in our [interactive GraphQL Explorer](#)
- We will provide a test plan which you can use for testing as these will be required to pass certification
- Once self-testing has been completed, you are ready for certification

Go live

- Once you have been certified by our support teams, you are ready to release this functionality into production. Communicate with your customers so they know to take advantage of your new capability!
